

FROSPItm front mirror for heavy trucks

FROSPItm blind spot front mirror

The soon mandatory to be retrofitted blind spot mirror, like our DOBLI[®] mirror, shows the blind spot on the *right* side next to the vehicle. However, most of the blind spot accidents happen between trucks and cyclists who stand somewhere in front of the truck.

Broad field of vision

A Dutch road security report from 2006 does therefore advice to install an additional front mirror or front camera. Our new FROSPItm front mirror offers a broad field of vision and shows the blind spot in front of your truck.

Already all new trucks > 7,5 tonnes carry a front mirror from 2007 on. But there is no compelling reason why older trucks should not be retrofitted. Beside increased road safety, the FROSPItm also prevents accident related costs and that at most economic conditions as our FROSPItm costs less than a scratch on your truck.

Blind spot mirror FROSPItm „fits“ on your truck

Why choose a FROSPItm front mirror?

- shows the blind spot in front of the truck
- extra broad range of vision
- fits on every truck type and brand
- easy mounting
- nicely shaped
- proven quality from the leading Dutch blind spot solution manufacturer GrootJebbink
